

AIMS Field — NFC Scanning Guide

Step-by-step, for field technicians. From tapping a tag to a signed report.

What this app does. You tap your phone on the NFC sticker stuck to a piece of equipment. The app instantly recognises the unit and lets you do one of two things on site: **acknowledge a delivery** (with proof photos, GPS and a recipient signature) or fill in a **Maintenance & Inspection Service Report** (checklist, remarks, and two signatures). The very first time a brand-new sticker is tapped, you link it to a product once — after that, every tap goes straight in.

Phone

An

Android phone with NFC

turned on. (iPhone is supported in the installed app only; NFC is not available in the iPhone browser.)

App

The

AIMS Field

app, or open the field site in **Chrome** on Android.

Login

Your AIMS account. Your organisation must have the

Field Scan

feature enabled by an admin.

Connection

Mobile data or Wi-Fi — photos and reports upload to AIMS as you go.

CONTENTS

1. Open the app & sign in
2. Tap an asset tag
3. First time? Register the tag
4. Choose what you're doing
5. Delivery: Start → Acknowledge → Sign
6. Maintenance Service Report (6 steps)
7. Finishing & doing the next one
8. Troubleshooting

1 Open the app & sign in

Open **AIMS Field** (or the field web link in Chrome) and sign in with your AIMS account.

- Field technicians land directly on the **scan** screen — there's no menu to navigate.
- If you see a message that *"Field scan is not enabled for your organisation"*, ask an admin to switch it on under **Admin → Configuration → Feature Flags**.

Tip: Make sure **NFC is enabled** in your phone settings before you start (Settings → Connected devices → NFC).

Sign-in screen

2 Tap an asset tag

On the home screen, tap the big **Tap to scan** button, then hold the **back of your phone** against the NFC sticker on the equipment until it buzzes.

- Button text changes to **Scanning...**, then **Looking up...** while it finds the unit.
- If the tag is already linked → you go straight to **"What are you doing?"** (step 4).
- If it's a brand-new tag → you go to **"New tag"** to register it (step 3).

Where's the NFC antenna? On most Android phones it's the upper-middle of the back. Move the phone slowly until it reads.

Home / scan screen (/scan)

FIRST-TIME TAGS ONLY

3 First time? Register the tag

A new sticker isn't linked to anything yet, so you link it once. **You don't create a new product** — you photograph the nameplate and pick the matching product from the catalog.

3a — Photograph the nameplate. Tap **Scan Equipment Label**, take a clear photo of the model/serial plate, then tap **Analyze**. The app reads the model and serial to help you.

3b — Pick the product & confirm. The **Product** box is pre-filled from the photo; if there's an exact match it's selected for you. Check the **Serial number**, then tap **Create & Bind**.

"No matching product"? The product isn't in the catalog yet. Ask the office to add it — new products can only be added from the office, not the field.

The screenshot shows a mobile app interface titled "New tag". At the top, the time is 9:42. Below the title, the "Tag UID" is displayed as 04:a1:b2:c3:d4:e5:f6. A message instructs the user to "Pick the product this unit is, then confirm." and notes that "New products can only be added by the office." The "Product" section features a text box containing "LION375 · LION375", with "Selected: LION375 · LION375" displayed below it. The "Serial number" section has a text box with "MG20240001". A note states, "From the nameplate. Stored for audit; the unit SKU is auto-generated." At the bottom, there is a large blue button labeled "Create & Bind" and a link labeled "Back to photo".

3b — pick product & confirm ([/scan/bind](#))

EVERY TAP FROM HERE

4

Choose what you're doing

After a successful tap you see the unit's details and two choices:

- **Start / Acknowledge Delivery** — appears only when this unit has an open Delivery Order. The card text changes to match: **Start Delivery** first, then **Acknowledge Delivery** after it's been started. If there's no open order it reads *"No open delivery order"* and is greyed out.
- **Maintenance Service Report** — always available; for any service or inspection visit.

Tap **Scan another asset** at the bottom to go back to the home screen.

Action chooser (`/scan/asset/...`)

PATH A — DELIVERY

5 Delivery: Start → Acknowledge → Sign

This is a **two-stage** flow with GPS tracking in between, so the office can see the unit move from the depot to the customer.

5a — Start Delivery (at the depot, before you leave). Tap the card → **Confirm & Start**. GPS tracking begins and a "Tracking delivery" notification stays in your tray.

5b — Acknowledge Delivery (at the destination). Tap the unit's card again → add optional **Notes**, tap **Add photos** for proof of delivery, then **Continue to signature**.

5c — Customer signature. Hand the phone to the recipient, have them sign, optionally type their name, and tap **Submit**. GPS tracking stops automatically.

Order matters: "Acknowledge" only unlocks after "Start". If a colleague started it, their name shows on the card.

The screenshot shows a mobile app interface for "Acknowledge Delivery". At the top, the status bar shows the time 10:02, signal strength, and battery level. The app header displays the title "Acknowledge Delivery" and a refresh icon. Below the header, the unit ID "DO-12345" is shown. A section for "Notes (optional)" contains a text input field with the placeholder text "Any condition issues or remarks at delivery". Below this is a "Proof of delivery (2)" section with three placeholder image boxes. A button labeled "Add photos" is positioned below the image boxes. At the bottom, there are two buttons: "Back" and "Continue to signature".

5b — Acknowledge Delivery

The screenshot shows a mobile app interface for "Customer signature". The status bar at the top shows the time 10:05, signal strength, and battery level. The app header displays the title "Customer signature" and a refresh icon. The main content area contains a text prompt: "Have the recipient sign in the box below to confirm the work / delivery."

Recipient name (optional)

Name

Clear

Submit

5c — Customer signature

PATH B — MAINTENANCE SERVICE REPORT

6 Maintenance Service Report — 6 steps

A guided wizard with a progress bar at the top (**Step X of 6**). Use **Back** / **Next** to move; **Next** stays locked until the current step is complete.

1. **Header** — search and pick the **Company** (required). **Client Email** auto-fills from their record (editable). Add **Job Location**. **Model** and **Serial No** are filled in for you and can't be edited. Set the **Service Date** (defaults to today) and an optional **Next Service Date**.
2. **Checklist** — tap each item you checked or serviced (control panel, PLC, HMI, pumps, valves, sensors, pressures, flow rate, ...).
3. **Remarks & Time** — **Time In** was captured automatically when you opened the form; **Time Out** is stamped when you submit. Type your **Remarks**.
4. **Service signature** — shows "**SERVICE BY {your company}**"; you (the technician) sign. Use **Re-sign** to redo.
5. **Client signature** — the customer reads the certification line, you type their **name**, and they sign.
6. **Payment** — choose one (this submits the report):
 - **No Payment Required** → the report PDF is **emailed to the customer** automatically.
 - **Payment Required** → a **Pending Invoice** is created on the office dashboard; the office invoices before contacting the customer.

The screenshot shows a mobile application interface for a 'Service Report'. At the top, the status bar shows the time 11:10 and signal/battery icons. The app header is 'Service Report' with a refresh icon. Below this is the title 'Maintenance & Inspection Service Report' and a subtitle 'Step 1 of 6 — Header'. A progress bar is shown with the first step highlighted in blue. The form contains several input fields: 'Company Name *' with the value 'Biofuel Industries Pte Ltd', 'Client Email' with 'ops@biofuel.com', 'Model' with 'LION375', and 'Serial No' with 'MG20240001'. Each field is enclosed in a rounded rectangular box.

Step 1 — Header

Step 2 — Checklist (25 items)

Step 6 — Payment (this submits)

7 Finishing & doing the next one

After you submit (either path), you'll see the **Submitted** screen confirming it's been sent back to AIMS.

- **Scan another asset** — go back to the home screen for the next unit.
- **Back to this asset** — return to the same unit's action screen (e.g. to do a second report).

Everything you submitted — photos, signatures, checklist, GPS track — is now visible to the office under **Service Reports** in the AIMS portal.

Done screen

"NFC is required" message

Your phone has no NFC or it's off, or you're on an iPhone browser. Turn NFC on in phone settings, or use the installed AIMS Field app on an NFC phone.

Tag won't read

Move the phone slowly over the sticker; the antenna is usually upper-middle of the back. Remove thick/metal cases.

"No matching product" when binding

The product isn't in the catalog. Ask the office to add it, then tap again.

Delivery card is greyed out

There's no open Delivery Order for this unit, or it's already been acknowledged. Use the Maintenance Service Report instead, or check with the office.

"Field scan is not enabled" An admin must enable it under **Admin → Configuration → Feature Flags** for your organisation.

Next button stays disabled

The current step needs something — pick a company, draw a signature, etc. The required field is highlighted.

Photo / signature won't upload

Check your data/Wi-Fi connection and try again; the app retries the upload.

Tag bound to the wrong product Don't re-tap to fix it — ask the office to correct the link in the portal.

Screens shown are simplified mock-ups of the live app; on-device wording and layout may differ slightly. This guide covers the field PWA flows: **/scan**, tag binding, the delivery (DO) flow, and the 6-step Maintenance & Inspection Service Report. Generated for AIMS Field.
